

# 2017 Caribbean Energy Storage Report

*The market takes off in the islands*

- Quantifying the **value** of energy storage for island grids:
  - Securing **system inertia** by providing **frequency regulation**
  - **Ramping** intermittent **renewables**

- Analysis of key **business models** for deploying **energy storage** systems:
  - Power purchase agreement (PPA) with renewables
  - Utility ownership and operation
  - Tolling agreement
- **Ranking of 31 islands in terms of opportunities** for energy storage

**Report price (sales tax not included):**

CREF 2017 attendee price:	US\$ 995
Early bird price (before Sept 22 <sup>nd</sup> )	US\$ 1095
Standard price	US\$ 1295

# 2017 Caribbean Energy Storage Report

## *The islands market takes off*

### Table of contents

#### **Changes in the international energy storage market**

**Lithium-ion as the leading technology**

**The decrease in lithium-ion battery prices**

#### **1 Island grids**

##### **1.1 Island grid characteristics**

##### **1.2 Impact of intermittent renewables on an island grid**

1.2.1 Increasing need for reserve in volume

1.2.2 Reduced system inertia

##### **1.3 Value of storage in the islands**

1.3.1 Frequency regulation

1.3.2 Collocating renewables with storage

#### **2 Business models to deploy storage in the islands**

##### **2.1 Power purchase agreement (PPA) for renewables plus storage**

2.1.1 The business model

2.1.2 Illustration of the business case with Puerto Rico

2.1.3 Pros and cons of this business model

##### **2.2 Utility purchases and operates the storage system**

2.2.1 The business model

2.2.2 St. Eustatius snapshot

2.2.3 Pros and cons of this business model

##### **2.3 Tolling agreement**

2.3.1 The business model

2.3.2 Snapshot: California using energy storage to replace peakers

2.3.3 Pros and cons of the business model

#### **3 Ranking the opportunities in the Caribbean for energy storage**

##### **3.1 Criteria for energy storage opportunity**

3.1.1 Share of intermittent renewable capacity

3.1.2 Oil-fired generation

3.1.3 Enabling environment for renewable energy investment

##### **3.2 Ranking of 31 Caribbean jurisdictions**

##### **3.3 Analysis of key jurisdictions for energy storage business**

3.3.1 Guadeloupe and Martinique

3.3.2 Jamaica

3.3.3 Dominican Republic

3.3.4 Curacao

3.3.5 Barbados

#### **4 Energy storage projects in the Caribbean**

## List of figures

- Figure 1: Technology split of energy storage systems (in capacity) installed globally in 2016
- Figure 2: Cost of the DC battery container (Ex Works) for MW-scale systems
- Figure 4: Jamaica electrical system inertia for different VRE production
- Figure 5: Frequency drift as a function of intermittent renewables penetration
- Figure 6: Opportunity for energy storage to replace spinning reserve and render less expensive generation capacity available
- Figure 7: Stakeholders and roles - PPA for renewables plus storage
- Figure 8: Frequency regulation constraints in Puerto Rico for a PV farm
- Figure 9: Example of PV generation forecast and corresponding production plan in the French islands
- Figure 10: Stakeholders and roles – utility buys and operates
- Figure 11: Operation of the hybrid PV plus storage plant in St Eustatius
- Figure 12: Stakeholders and roles – tolling agreement
- Figure 13: Share of intermittent renewables capacity in the different Caribbean islands
- Figure 14: Amount of oil-fired generation in the Caribbean (in MW)
- Figure 15: Enabling environment for renewable energy investment in the Caribbean (Source: Castalia 2016)
- Figure 16: Ranking of the Caribbean jurisdictions based on the opportunity they represent for storage
- Figure 17: Electricity mixes of Guadeloupe (left) and Martinique (right) as of 2014 (GWh)
- Figure 18: Guadeloupe and Martinique renewables plus storage targets
- Figure 19: JPS net electricity generation in 2014, excluding IPPs generation share (in GWh)
- Figure 20: Dominican Republic energy mix by generation source in 2015
- Figure 21: Barbados electricity generation portfolio totaling 249 MW (MW)

### **Interested?**

The report is available for (sales tax not included):

Standard price: **1 295 USD**

CREF 2017 attendee price: **995 USD**

Early Bird price (before 22<sup>nd</sup> Sept): **1 095 USD**
