

Market Segment Watch: Second-life and recycling of electric vehicle lithium-ion batteries

Table of contents

Executive summary	2
Table of figures	6
Introduction	7
Production of lithium-ion batteries – increase in volume	7
EV uptake and the demand for energetically dense batteries	7
Chemistries of lithium-ion batteries	9
Nickel Manganese Cobalt (NMC)	11
Nickel Cobalt Aluminum (NCA)	11
Lithium Iron Phosphate (LFP)	12
Other Lithium-based batteries	12
Nickel-based batteries	13
Economic and environmental concerns for “end of life” EV batteries	15
Lifetime of lithium-ion batteries in EVs	17
Recycling of lithium-ion batteries	18
Policy concerning recycling	19
Europe	19
North America	21
Metals of interest	21
Cobalt	23
Nickel	24
Lithium	25
Copper	26
Material Volumes	26
Methods of recycling lithium-ion batteries	28
Pyrometallurgic	28
Hydrometallurgical	29
Mixed treatment	31
Direct physical treatment	31
Economics of battery recycling	32
Recycling costs and potential revenues	33
Transportation and collection costs	37
Recycling Companies and Actors	37
Concerns with collection, transportation, and hoarding	39
Second-life applications	40
Rationale for second-life applications	41
Current methods and obstacles	43
Direct Removal	43
Dismantling and Repurposing	44

Market Segment Watch: Second-life and recycling of electric vehicle lithium-ion batteries

Alternative methods	44
Pricing and availability	45
Market potential for EV second-life batteries	45
Economic comparison and competitiveness of second-life batteries	46
Environmental impacts of second-life battery projects	49
Current and future projects concerning second-life applications	52
DTE Energy's Community Energy Storage	54
Aceleron	54
ELSA Gateshead College second-life project	54
EcarACCU	55
Renault	55
Audi	56
Volkswagen	56
BYD	57
Nissan-Mitsubishi	57
Volvo	58
Hyundai	58
Daimler – Mercedes	58
General Motors	59
Toyota	59
BMW	60
Conclusions	61
